

SCADA products... for the distance

ClearSCADA

SCADAPack

We help customers evolve their ideas

Control Microsystems is a wholly owned subsidiary of the SCADA Group, one of the world's largest private SCADA products and services companies. Focused on remote monitoring and control applications within utility sectors, Control Microsystems and the SCADA Group bring more than 25 years of experience to the market. As the products arm of the group, Control Microsystems is a leading supplier of Supervisory Control and Data Acquisition (SCADA) hardware and software with operations in the United States, Canada, Europe and Asia.

From Sensor to Enterprise...

Founded in 1980, Control Microsystems has operated under a simple business concept for over 25 years; develop products that are relevant to customers and back them with tailored support. During the past decade this concept has resulted in exceptional growth and increased market acknowledgment that Control Microsystems is the SCADA products supplier of choice for a variety of utility markets.

The company's SCADAPack™ brand of RTU/PLCs is one of the most recognizable in the industry with approximately 150,000 units in the field. The SCADASense™ and RealFLO™ product lines lead the company's success in the gas flow measurement market through deployments in many of the world's largest natural gas producers. The company's Trio™ data radios offer state-of-the-art networking solutions while the Accutech™ wireless instruments solve the most difficult process sensor challenges. The company's FlowStation™ targets the water treatment industry with a dedicated, web server-based lift station pump controller that takes advantage of internet and GPRS technologies to offer both local and remote connection options.

To manage the installation is the fully scalable host platform, ClearSCADA™, providing all the necessary data collection, security and display features needed in any modern SCADA application whether at a single site or in a complex distributed installation. Coupled with this highly developed SCADA host platform, the company's overall product line includes all the elements needed for a complete **Sensor to Enterprise** solution.

Team with staying power...

Control Microsystems serves the global market through operations based in the United States, Canada, Europe and Asia. Headquartered in Ottawa, Canada, the company is partnered with over 75 Distributors and Product Representative companies around the world. With a proven record for recruiting and retaining effective industry talent and the successful leverage of the global sales partners, Control Microsystems is able to provide a unique and positive experience to all customers through a helpful team of over 100 direct employees.

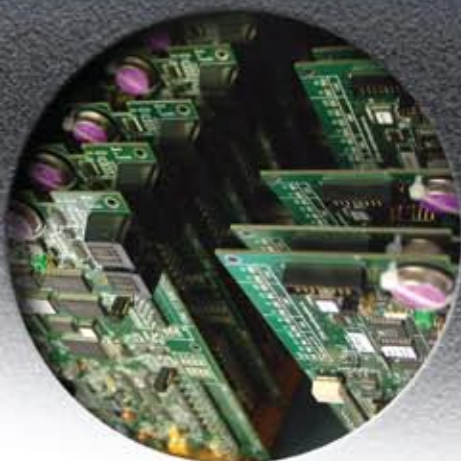

Made-right-here...

Generally the SCADA industry operates on an on-demand basis where customers require brief periods between request and delivery. As an ISO 9000 registered company, and with suppliers tightly integrated with the manufacturing process, Control Microsystems maintains consistent delivery performance across all product lines. Central to consistent performance is the fact that all of our SCADAPack RTU/PLCs, SCADASense Gas Flow products and Accutech Wireless Instrumentation products are manufactured and assembled in North America with all products flowing through final assembly, test and quality control in our factory.

To foster quick response, Control Microsystems employs an integrated ERP system that immediately translates customer orders into factory demand. Modern cell-based manufacturing techniques then minimize shop time and optimize throughput. The company continuously provides the best delivery performance in the business.

CONTROL MICROSYSTEMS

At the heart of design is knowledge, customer knowledge...

In addition to a successful history, effective service teams and quick delivery, Control Microsystems knows that the right product needs to be offered if customers are to keep coming back. With this in mind the company spends over 15% of revenue on the design, development and test of products. This financial commitment is backed by a dedicated product team that is directly involved with the user community and able to keep the customer tightly associated to the development process. The result is a consistent line of products that maintain long useful life cycles and low cost of ownership. It is this level of commitment that allows the company's original tag line to still ring true:

SCADA products... for the distance.
